- ✓ Increased Blade Life
- ✓ Direct Replacement
- ✓ Available Cut-to-Length

Common Issues

Blade Life

Blade Injuries

Direct Replacement

TRUPOINT™ DURAPPOINT™

The exclusive formulation extends blade life up to 30% longer than standard UHMW. This means fewer blade changes and better metering over an extended period.

The properties of the blade material reduce the risk of injury when installing and removing blades from the press.

Testing a new blade takes time. DuraPoint is a direct replacement ; no need for a blade trial - simply drop it in and go.

More Solutions:

TruPoint ProFlex

Our ProFlex blade is manufactured from a unique Teflon filled polymer for increased stiffness and superior blade life. ProFlex delivers precision metering in higher line screen applications and is ideal for long runs and abrasive inks.

TruPoint UHMW

Our UHMW blade is the original ultra high molecular weight polyethylene doctor blade developed for extended blade life.

"When we found ourselves without replacement doctor blades, you took it upon yourselves to expedite my order, cutting and overnighting my blades so I wouldn't be left without a press. Your staff is exceptional and your customer service is among the best in the industry."

Brian Goodman, Print Shop Manager
Clear View Bag Co.
